

Bird Assemblages as an Indicator of Riparian Quality

Margaret England, Weber State University

Andreas Leidolf, Utah State University, and Michelle A. Baker, Utah State University

Purpose

- Human disturbance can have a significant impact on the integrity of the surrounding riparian areas and the species they contain.
- Birds function as a useful indicator of environmental factors, and are relatively easy to monitor.
- We wanted to explore the extent to which avian species assemblages and water quality data could be used to assess the influence of human disturbance on riparian integrity.

Human Disturbance Assessment

- Human disturbance was assessed at each monitoring station using 25 parameters in 5 disturbance categories (adapted from Bryce et al. 1999), resulting in a score of 0-25 based on the number of parameters present.

Red Butte Creek 900W GAMUT: Disturbance Score of 20 (highest)

Analysis

- Descriptive analysis of the avifauna of the 3 watersheds (abundance, richness, diversity, evenness, conservation value)
- Comparison of water quality and avifaunal parameters with respect to site disturbance.

Results

Descriptive Analysis

- Total number of birds: 188 (LR), 129 (RBC), 188 (PR).
- Total species: 83 (LR), 49 (RBC), 72 (PR)
- Similarity among watersheds:

	LR	RBC	PR
LR	1.0		
RBC	0.64	1.0	
PR	0.66	0.59	1.0

Sorensen Similarity Matrix of Species Found in Each Watershed

Confounding Factors

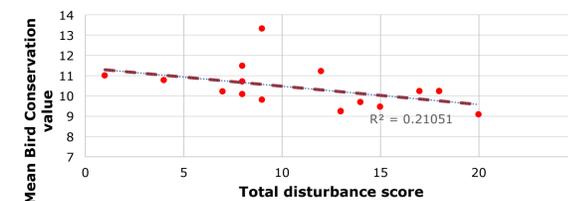

- Different Watersheds:

	LR	RBC	PR
LR	1.0		
RBC	0.61	1.0	
PR	0.63	0.53	1.0

Similarity Matrix of Species Found in Each Watershed from eBird

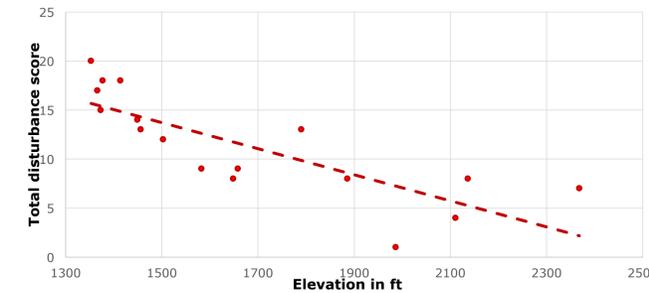

- Elevation:

MBCV vs Disturbance

As human disturbance increases, conservation value decreases

Disturbance vs Elevation

Lower elevation correlates to increased human disturbance

Deriving Meaningful Metrics

- Avian Census Data Summary Example:

Site 1	TAB: 48	S: 16	H': 2.4407
N = 1			

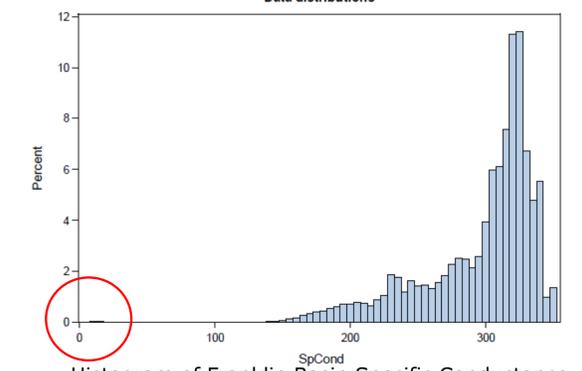

- Water Quality Data Example:

Site 1	SpCond
2014-06-20 20:00:00	258.3
2014-06-20 20:15:00	7.645
2014-06-20 20:30:00	258.3
2014-06-20 20:45:00	258.3
2014-06-20 21:00:00	258.2
2014-06-20 21:15:00	258.3
2014-06-20 21:30:00	258.3
...	...
2017-07-05 06:00:00	279.2

N = 211.670

Data distributions

Histogram of Franklin Basin Specific Conductance

Extant Data

- Birds observations from the field were supplemented with records from eBird.org.
- Records retrieved were limited to the vicinity of field sites, and the 2013-2017 breeding seasons.

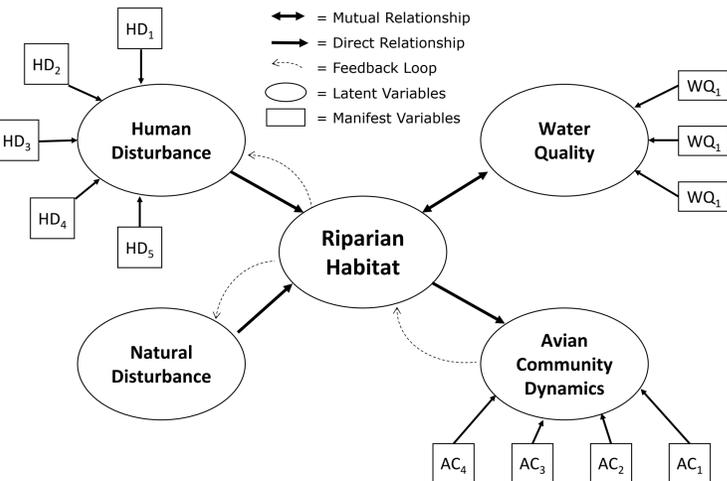

Map of American Dipper sightings from eBird.org.

- Water quality parameters retrieved for all GAMUT aquatic sites: specific conductance, temperature, and turbidity (data.iutahepsc.org).

Western Tanager

Structural Equation Model of Relationships Affecting Riparian Integrity

Field Methods

- Avian census using point counts at 15-18 monitoring stations in each of 3 iUTAH experimental watersheds.
- Monitoring stations were co-located with existing GAMUT aquatic sites (3 stations per site).
